

NEXT-GEN API SECURITY TESTING

Stop unknown API threats before they breach.

Designed for IT infrastructure and data center leaders to protect digital assets and align cybersecurity with business agility across BFSI, telecom, and public sector operations.

● RapiFuzz® - APIFUZZER™

APIFUZZER™ is a state-of-the-art API security fuzzing platform designed to systematically expose hidden vulnerabilities and provide actionable remediation instructions before they can be exploited in production environments.

- ✓ **Zero-Day Discovery:** Uses advanced mutation-based fuzzing to inject unexpected data into endpoints, uncovering deeply hidden logic flaws that traditional scanners miss.
- ✓ **Comprehensive Protection:** Automatically detects critical OWASP API Top 10 vulnerabilities, including Broken Object-Level Authorization (BOLA) and Excessive Data Exposure.
- ✓ **Automated API Discovery:** Generates an accurate API-SBOM to eliminate shadow APIs and dynamically validate against your living documentation.

MTTR Reduction: By identifying input validation errors early, RapiFuzz delivers highly actionable mitigation instructions. The clientless deployment plugs directly into CI/CD pipelines, drastically lowering Mean Time to Remediation without slowing releases.

APIFUZZER™ Analytics Overview
Live Monitoring

1,204

Total APIs Monitored

- Secure (1,152)
- Vulnerable (52)

● Beyond APIs: Complete Cyber Resilience

For IT infrastructure leaders, security does not stop at discovery. It requires an orchestrated, rapid response ecosystem that empowers your operations teams to act decisively without halting business momentum.

● RapiFuzz® - INTRACIS™

For IT infrastructure leaders, security requires rapid, coordinated response that helps teams act decisively without slowing business.

● Training & Readiness Platforms

- ➔ **RapiFuzz® - CyberKshetra™:** Immersive digital environment replicating real-world cyber threats for hands-on, practical SecOps training.
- ➔ **RapiFuzz® - CRISISIM™:** Advanced Crisis Simulator enhancing incident response through interactive, pressure-tested tabletop drills.

Making security simple.

- ✓ Effortless CI/CD Integration
- ✓ Clientless Deployment
- ✓ Lower Remediation Time (MTTR)

- Secure - Resilient - Regulated -
