

Alfresco Content Connector for SAP Applications

SAP Certified
Integration with SAP S/4HANA

The Alfresco Content Connector for SAP applications is an add-on module that offers seamless integration between Alfresco Content Services and SAP (R/3, S/4HANA). It connects the structured data in SAP with the unstructured data (or “living content”) in Alfresco.

The following image shows a simple representation of how Content Services (plus other Alfresco products) and the SAP Connector interact with SAP systems.

Summary of the key capabilities:

● Certified by SAP :

All SAP HTTP-Content Server related standard scenarios are covered. For example:

- SAP Archivelink
 - Incoming documents (e.g. incoming invoices)
 - Early Archiving with SAP Workflow
 - Early Archiving with Barcode
 - Late Archiving
 - Outgoing documents (e.g. order confirmations)
 - Print List Archiving (e.g. quarter end reports)
 - SAP Workflow

- SAP Document Management Service (DMS)
- SAP Attachments
- SAP Data Archiving (ADK)

● Improved Productivity :

One single source of truth for content via different user interfaces improves productivity.

● Collaboration Ready :

Make content available in the business process for different teams inside or outside the company.

● Metadata Synchronization :

Leverage structured data also outside SAP with automated metadata synchronization.
