TAMA STAR BUBINGA

Lacquer Finishes

STAR is the flagship line for TAMA drums. It takes the knowledge and research we cultivated for the Starclassic series to the next level, by reexamining every detail to enhance shell resonance. STAR Bubinga features a thin 5mm shell. Every shell comes equipped with 9mm thick Sound Focus Rings (SFR) for structural support. This shell configuration provides clear projection and resonance to highlight the distinct sound of Bubinga.

TAMA STAR WALNUT

Lacquer Finishes

STAR is the flagship line for TAMA drums. It takes the knowledge and research we cultivated for the Starclassic series to the next level, by reexamining every detail to enhance shell resonance. Walnut has long been favored by furniture makers for both its beauty and durability. As a drum shell material, Walnut's naturally EQ'ed tone has been praised by the drum community for both the stage and the studio. The STAR Walnut shells project booming low end with enough cut to be heard through any mix.

STARCLASSIC MAPLE

Exotic Finishes

For more Information:

In the '80s TAMA's Superstars and Imperialstars reigned supreme - the perfect drums for the times. But TAMA's builders and designers wanted something that transcended trends, something timeless - drums that understood a player's passion and allowed the expression of every genre, style, mood, and technique. They created Starclassic Maple drums...and ignited the thin-shell revolution. And now the Exotic Finish line offers beautiful, one-of-a-kind exotic wood exteriors for that extra luxurious touch. Numerous options are available to meet the varied and critical needs of professional drummers including a selection of about 30 different shell sizes. Starclassic Maple also features three shell hardware finishes to choose from: Black Nickel, Chrome and Smoked Black Nickel. Starclassic Maple is simply an unprecedented combination of sight and sound.

STARCLASSIC WALNUT/BIRCH

Lacquer Finishes

Exploring limitless possibilities, our result in the wake of countless experimentation came in the form of the Hybrid Shell Walnut/Birch: combining the superior quality warmth and mid to low frequency tone of the increasingly popular and truly unique Walnut, with the well-defined and uncompromisingly solid attack of Birch. Whilst we successfully preserved their unique sonic trademarks, the characteristics of both Walnut and Birch blend to persuade a very focused sound that would define itself with great distinction within a musical ensemble; married with controlled sustain and clarity; all sealed with an undeniably palpable feeling of warmth and resonance when performed.

SUPERSTAR CLASSIC

Exotic Finishes

For more than forty years, the Superstar name has stood for groundbreaking design, superior build quality, sterling tone, and clear projection. Superstar Classic once again upholds tradition by raising the bar for discerning drummers—and remarkably—does it while also lowering the price. Drawing on Superstar of the past, its classic TAMA T-shape badge and streamlined low-mass single lugs point to the simpler state of art of the 70's, while the ingenious Star-Mount system and the thinner gauge 100% maple shells eclipse anything in its class.

Acoustic-Tone Tom & Floor Tom Pads

Tom and floor tom pads are designed to produce realistic stick response, while emanating a low-volume acoustic drum sound. Accordingly, the pad surface is a dual-layer of foam rubber with a moderately soft touch response, not overly springy, and a pliable resin shell acts as an acoustic chamber.

Solid Kick Bass Pad

TAMA's True Touch Solid Kit Bass Pad provides the utmost dynamic expression, articulation and accuracy in a bass drum practice pad.

AAD Snare Pad

TAMA's True Touch AAD (Accuracy, Articulation, Dynamics) Snare Pad provides the utmost dynamic expression, articulation and accuracy in a practice pad. Special feature: For even more individual expression, the pad can be tuned like an acoustic snare drum!

Snare Buzz Spheres

These stainless-steel balls produce a clean, staccato snare buzz sound and hit against the aluminum plate in a dynamic way - harder hits result in more snare buzz sound, while softer hits have less snare sound.

MIRROR ROD

The Mirror Rod is a double pedal connecting rod designed to eliminate play and deliver an overwhelmingly smooth playing experience. By utilizing ball bearings, lightweight materials, a streamlined design, and concentrating the weight at the central axis, an extremely precise motion is achieved, eliminating pedal lag or play. An extreme ease of operation is achieved by a simplified pedal attachment and length adjustment design.

TMR1000

Zero Latency with 8 Ball Bearings (PAT Pend.)

By placing 8 Ball Bearings as close to the center axis of ratation as possible, the rod is more balanced and can rotate faster and smoother.

Quiet Design

The Mirror Rod's streamlined design and use of ball bearings deliver an extremely quiet operation.

Extremely Smooth and Mirror-like Action

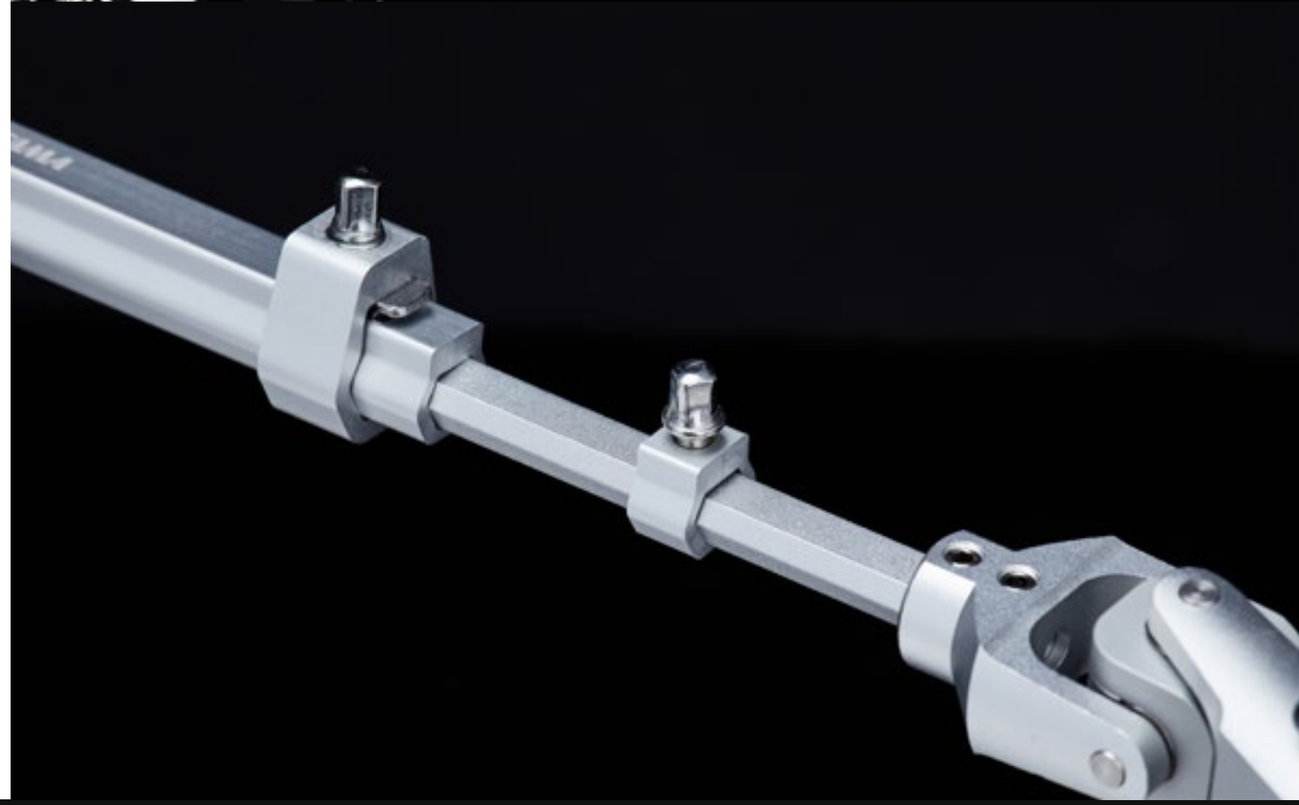

To achieve smooth action without any lag or play, the Mirror Rod utilizes a simple and reliable ball bearing design and is constructed with lightweight machined aluminum parts.

Quick and Easy Setup

The Mirror Rod allows for a simple, quick, and easy set up by its unique design using fewer mounting & adjustments bolts.

DRUM PEDALS

Our Iron Cobra pedals have long been praised for being smooth, reliable, and independently adjustable. Iron Cobra pedals are offered in the high end 900 series as well as the standard 600 and 200 models. Speed Cobra 910 and 310 drum pedals feature a longer footboard for a lighter, quicker feel. Our drum pedal range is designed to fit the needs of every drummer.

SPARTAN

CYMBAL STANDS

The heavy weight of the stand pressing on your shoulder as you carry your gear. The frustration and unease when adjustments don't go smoothly during setup. The subtle fatigue that sets in before you've even played a note. These are minor discomforts that many drummers experience – but often go unspoken, unrecognized. Yet over time, they quietly erode a drummer's focus, expressive power, and ultimately, the quality of their performance.

We created Spartan with the goal of eliminating these unseen obstacles – so that drummers can fully unlock their creative potential.

In developing Spartan, our pursuit extended far beyond simple weight reduction. Equipped with innovative features such as the Anti-Walk Rubber Feet to prevent movement during performance, and the Duo-Lock Boom Tilter that allows for simultaneous adjustment of boom angle and length, Spartan is designed to offer not only lightness, but also fast, intuitive setup and rock-solid stability for confident play.

To enhance playability, we combined TAMA's accumulated mechanical innovations into a design that achieves an ideal level of lightness – light enough to reduce physical strain, yet strong enough to support professional demands. The result is a perfectly balanced harmony of form and function: a stand that feels "just right" for every drummer.

Spartan's true potential cannot be fully captured in a product spec sheet. But for those who touch it, its originality is unmistakable – something no other brand has yet realized. It is a stand that responds to the drummer's needs, stands firm in demanding environments, and enables free, creative performance at every level.

What do drummers truly seek in a stand? Spartan is the answer we arrived at by listening deeply to the unspoken voices in the hearts of drummers.

A new standard – confidently proposed by TAMA for the future of drumming.

About Spartan Series

In the 1970s, TAMA introduced the Spartan hardware series – a line engineered for lightweight construction and durability. However, as hard-rock and heavy-metal music rose in popularity, drummers demanded more heavy-duty stands, and the Spartan series ultimately fell out of step with the era's needs.
Today, the landscape has shifted again. Responding to renewed demand for lighter, more portable hardware, we have revived the Spartan name – re-imagined for the modern drummer yet firmly rooted in the spirit and innovation of the original.

Lightweight Aluminum Pipe

In pursuit of the ultimate lightweight design, this new series from TAMA was developed entirely from the ground up, with all parts and mechanisms reimagined from scratch. Using lightweight aluminum extensively throughout, each component has been carefully designed to minimize size. At the same time, achieving a high level of stability alongside a reduced weight is the core concept behind the Spartan stand. To ensure this, critical adjustment points that tend to experience wear and tear – such as the boom tilter, bolts, and T-nut threads – are made from high-strength, durable materials like zinc die-cast and steel.
Furthermore, the stand legs combine aluminum construction with a hollow pipe-shaped design, delivering not only exceptional lightness but reliable strength.

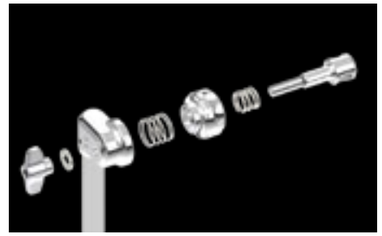

Anti-Walk Rubber Feet

To prevent cymbal stand "walking" while playing, TAMA has developed an all-new rubber tip.
Even when the stand lifts slightly off the floor while playing, a piece at the center of the rubber foot remains in contact with the floor, effectively minimizing unwanted movement during performance.
This innovative feature delivers a level of stability that's almost unbelievable believe given the stand's lightweight design – yet another practical and original solution from TAMA.

Duo-Lock Boom Tilter

A newly developed TAMA original tilter designed specifically for the Spartan stand. Using only one T-nut, the boom arm and tilter can be adjusted independently, depending how much you loosen the T-nut. Loosen it slightly to adjust only the boom arm length while keeping the tilter angle fixed, or, loosen it further to adjust both the boom arm length and angle at the same time.
Thanks to its simple and user-friendly design, setup is quick and effortless.
