Som kontrast til finger's short, hvor det er "pump og dump", fandt jeg denne her, der dels forklarer hvorfor Iterum steg helt vildt i sidste uge!

Og dels ligger sine shorts som beskrevet, når slår op: Hvad er shorts!

Og som jeg, om end nødtvungen, måske godt kunne acceptere som værende OK!

Se side 2 af 2 (short over året 2020):

30-01-2020, begyndende med 2,93 \$

Røde tal sætter short, grønne tal fjerner short fra markedet?

Det er helt tydeligt at her væddes omkring: Går det ned? Går det op? Og short i markedet reguleres straks!

Fra 15-11-2020 er der kun én vej, og det er op i kurs?

Hvorfor der må være et gedigent tab på de short, der er sat i perioden!

Så hvis ikke pump og dump, vil der være en KÆMPE risiko, når sætter short, og det er vel i bund og grund (måske) sundt!

Så hvis sætter short med "dump og sump", så er det risikofrit, men samtidig er det manipulering af markedet?

Derfor snyd og bedrag, og bør forbydes, min mening!
